

Cubics 5 : A Graph Plotting Exercise

In each case find where the curve crosses the x and y axis and then sketch the curve.

You could also consider stationary point use to help if you require it.

$$\textcircled{1} \quad y = x^3 - 4x$$

$$\textcircled{2} \quad y = x^3 - 2x^2$$

$$\textcircled{3} \quad y = x^3 - 7x + 6$$

$$\textcircled{4} \quad y = x^3 - 2x^2 - x + 2$$

$$\textcircled{5} \quad y = -x^3 - x^2 + 4x + 4$$
